CALIBRATION

Valid To: June 30, 2020

Certificate Number: 1855.01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following calibrations¹:

I. Acoustical

Parameter/Equipment	Range	CMC ² (±)	Comments
Sound Level Meters ³	94 & 114 dB	0.60 dB	Sound level calibrator

II. Chemical Quantities

Parameter/Equipment	Range	CMC ² (±)	Comments
pH Meters ³	4 pH unit 7 pH unit 10 pH unit	0.014 pH 0.015 pH 0.025 pH	Certified pH standards
Conductivity Meters ³	10 µS 100 µS 1000 µS 1430 µS	0.12 µS 0.86 µS 5.9 µS 8.5 µS	Certified µS standards

¹ This laboratory offers commercial dimensional testing/calibration and field service.

² Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of $k = 2$. The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.

- ³ Field calibration service is available for this calibration and this laboratory meets A2LA R104 – *General Requirements: Accreditation of Field Testing and Field Calibration Laboratories* for these calibrations. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the CMC found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the actual uncertainty introduced by the item being calibrated, (e.g. resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC.
- ⁴ The measurands stated are generated and measured using the indicated instrument (see Comments). This capability is suitable for the calibration of the devices intended to measure the measurand in the ranges indicated. CMC are expressed as either a specific value that covers the full range or as a fraction of the reading plus a fixed floor specification.
- ⁵ Based on using the standard at the temperature the Fluke 5520A was calibrated ($t_{cal} \pm 5 \text{ }^{\circ}\text{C}$) and assuming the instrument was zeroed at least every seven days or when the ambient temperature changes more than $5 \text{ }^{\circ}\text{C}$, the CMC is read as percent output plus 1-year floor specifications. For resistance, a zero calibration is performed at least every 12 hours within $\pm 1 \text{ }^{\circ}\text{C}$ of use. For AC Current, CMC's are determined with LCOMP off.
- ⁶ Unless otherwise noted, in the statement of CMC L is the nominal length of the device in inches; R is the resolution of the unit; D is the nominal diameter in inches; H is the nominal height of the unit under test.
- ⁷ Deflection is the maximum deviation from the reference plane.
- ⁸ In the statement of CMC, the value is defined as the percentage of reading, unless otherwise noted.
- ⁹ This laboratory meets R205 – *Specific Requirements: Calibration Laboratory Accreditation Program* for the dimensional test listed above and is considered equivalent to that of a calibration.

Accredited Laboratory

A2LA has accredited

TIC-MS, INC.

St. Louis, MO

for technical competence in the field of

Calibration

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2005 *General requirements for the competence of testing and calibration laboratories*. This laboratory also meets the requirements of ANSI/NCSLI Z540-1-1994 and R205 – Specific Requirements: Calibration Laboratory Accreditation Program. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 3rd day of July 2018.
